

— HANDOVER GUIDE

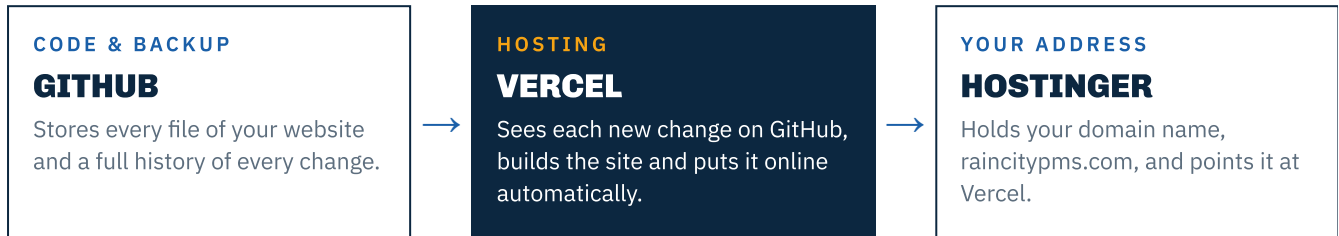

YOUR WEBSITE GUIDE

Where your website lives, how it goes live, and how to keep it safe. Written in plain language, with no technical knowledge needed.

01 · THE BIG PICTURE

THREE PIECES WORK TOGETHER

Your website runs on three services. Each has one job, and you own the account for each.

In short: **a change is saved to GitHub → Vercel publishes it by itself within about two minutes → visitors see it at raincitypms.com.** Nobody has to upload files or press a publish button.

Your details at a glance

WHAT	WHERE
Website	raincitypms.com (the <code>www.</code> address forwards here automatically)
Code (GitHub)	github.com/getraincity/raincity-website , on the account getraincity
Hosting (Vercel)	vercel.com/getraincity/raincity-website , on the account getraincity
Domain (Hostinger)	raincitypms.com , registered at Hostinger. Paid until 25 April 2027.
Built with	Next.js, a modern website framework. Every page is prepared in advance, so it loads fast and has very little that can break.
Office hours shown	Mon – Sat, 8 am – 4 pm (closed Sunday)

02 · GITHUB

WHERE YOUR CODE LIVES: YOUR MASTER COPY

GitHub keeps your website's files, and it remembers **every version ever saved**. Each saved change, called a *commit*, is recorded with its date and a short description of what changed. So **GitHub is also your backup**: any earlier version of the site can be brought back.

THE GOLDEN RULE

Every change to the website must be pushed (saved) to GitHub. GitHub is the only master copy. A change made anywhere else is not backed up, won't go live, and will be overwritten the next time someone pushes.

Looking after GitHub

- ◆ **Keep the login safe**, and turn on two-factor authentication: profile picture → *Settings* → *Password and authentication*.
- ◆ **Never delete or rename the repository** (the project folder, `raincity-website`). Vercel finds your site by that name.
- ◆ **Give a developer access by inviting them, never by sharing your password**: open the repository → *Settings* → *Collaborators* → *Add people*. Remove them the same way when the work ends. Anyone who can push to GitHub can change the live website.
- ◆ **Who can see the code**: the repository is currently *public*, meaning anyone with the link can read the code (not change it). If you prefer it hidden, switch it to private: *Settings* → scroll to *Danger Zone* → *Change visibility*. The website keeps working either way.

03 · VERCEL

YOUR HOSTING: IT PUBLISHES BY ITSELF

Vercel serves your website to visitors, quickly, from servers around the world. It also looks after the security certificate (the padlock in the address bar) automatically.

How automatic publishing works

1. A change is pushed to GitHub.
2. Vercel notices within seconds and builds the new version (usually 1–2 minutes).
3. If the build succeeds, the new version replaces the old one. Visitors never see a half-finished page.
4. **If the build fails, the previous version stays online.** A bad update can't take your website down, and Vercel emails the account owner about the failure.

The parts of the Vercel dashboard you may use

AREA	WHAT IT'S FOR
Deployments	A list of every version ever published. Ready (green) means live and fine; Error (red) means that update failed and the previous version is still live.
Instant Rollback	Your undo button. In <i>Deployments</i> , open the ... menu beside the last good version and choose <i>Instant Rollback</i> (or <i>Promote to Production</i>). The site returns to that version in seconds.
Settings → Domains	Connects <code>raincitypms.com</code> and <code>www.raincitypms.com</code> to the site. Leave these as they are.
Settings → Environment Variables	Private settings, like passwords, that the website uses: mainly for the quote form (see section 05). After changing one, redeploy the latest version for it to take effect.
Logs	Technical messages that help a developer find a problem. Useful to share when you report something.

CHECK YOUR VERCEL PLAN

Vercel's free *Hobby* plan is meant for personal, non-commercial projects. A business website should be on a paid plan (*Pro*). You can see and change the plan under your account's *Settings* → *Billing*; current prices are at vercel.com/pricing.

Please don't: delete the Vercel project, disconnect it from GitHub, or change its build settings. Any of these stops automatic publishing.

04 · YOUR DOMAIN

RAINCITYPMS.COM AT HOSTINGER

Your domain name is rented yearly from Hostinger. It is **paid until 25 April 2027**.

- ◆ **Turn on auto-renew** in your Hostinger account and keep the card on file current. If the domain lapses, your website *and* any email on the domain stop working.
- ◆ Hostinger also holds the domain's **DNS records**, the signposts that send visitors to Vercel. **Don't edit or delete the records that point to Vercel**. If you ever set up email on the domain, its records are added here too, next to them.

05 · EMAIL & THE QUOTE FORM

HOW ENQUIRIES REACH YOU

- ◆ The website shows **info@raincitypms.com** as your email address, and **+1 604 209 3357** as your phone. Tapping the number opens WhatsApp. The "Call Us Now" buttons still make a normal call.
- ◆ The **"Get a Free Quote" form** sends each request through an email service called **Resend** to **raincitypms@gmail.com**. Its settings are the Vercel *Environment Variables* from section 03:

SETTING	WHAT IT DOES
NEXT_PUBLIC_FORM_ENDPOINT	Tells the form where to send requests (<code>/api/contact</code>).
RESEND_API_KEY	The private key for your Resend account. Keep it secret.
RESEND_FROM_EMAIL	The "from" address on quote emails, e.g. <code>noreply@raincitypms.com</code> .
NEXT_PUBLIC_GOOGLE_MAPS_KEY	Optional. Turns the area photos into live Google Maps. Without it, a photo of the region is shown.

TEST AFTER ANY CHANGE

Whenever these settings, your email or your domain change, send yourself one test request from the website's quote form and check it arrives (look in Spam too).

SEEING HOW THE SITE PERFORMS

TOOL	WHAT IT TELLS YOU
Google Analytics	How many people visit, from where, and which pages they read. analytics.google.com
Microsoft Clarity	Heatmaps and anonymous recordings of how visitors scroll and click. clarity.microsoft.com
Google Search Console	How you appear in Google search, and any problems Google finds. search.google.com/search-console
Google Business Profile	Your listing and reviews. The website links to it and shows your rating.

KEEP ONE SET OF FACTS

Google trusts a business more when its details match everywhere. If your hours, phone number or services change, update your **Google Business Profile** and the **website** together.

UPDATING TEXT, PHOTOS OR SERVICES

All the wording and photos are part of the website's code, so changes are made by your developer: they edit, push to GitHub, and Vercel publishes it. To ask for a change, send:

- ◆ **The page:** a link, or a screenshot with the spot circled.
- ◆ **The exact new wording,** written as you want it to appear.
- ◆ **Photos as original files,** at the largest size your phone allows (on WhatsApp, send as a *document* so they aren't shrunk).

Job photos: the more, the better

Every service page has a "**See the Work Up Close**" gallery. Your own before-and-after photos go first. Where there aren't enough yet, clearly labelled example photos fill the row. **Each new job you send replaces an example automatically.** For the best results:

- ◆ Take the *before* and *after* from the **same spot and angle.**
- ◆ Avoid house numbers, street signs, faces and customer details in the frame.
- ◆ Send them all, including extras: each job can show several photos when clicked.

YOUR ACCOUNTS

Accounts you own

GitHub (getraincity) · Vercel (getraincity) ·
Hostinger · Google (Analytics, Search Console,
Business Profile) · Microsoft Clarity · Resend

Good habits

Store the logins in a password manager. Turn on two-factor authentication. **Invite** people instead of sharing passwords, and remove access when work ends.

QUICK FIXES

WHAT YOU NOTICE	WHAT TO DO
The site looks wrong right after an update	Vercel → <i>Deployments</i> → ...next to the last good version → <i>Instant Rollback</i> . Then tell your developer.
The site won't load at all	Check that the domain hasn't expired at Hostinger, and check vercel-status.com for an outage.
Quote requests stop arriving	Check Spam, send a test from the website, and check the Environment Variables in Vercel (section 05).
An update shows <i>Error in Vercel</i>	Nothing is broken for visitors; the previous version is still live. Send the error to your developer.

A SHORT TO-DO LIST

- ◆ **Terms & Conditions and Privacy Policy:** written as standard policy text for a BC service business. Please have a lawyer review them. Until then they are kept out of Google search on purpose.
- ◆ **Blog articles:** please read them and confirm the advice matches how you work. They're published under your company's name.
- ◆ **Original photos** of Wilson and Glevin, and more **job photos** for every service.
